KALIMANTAN, 1 JANUARY TO 12 OCTOBER 2026

252,279 fire hotspots.

Behind every dot on the map: forest, peat, wildlife, and the air that millions of people breathe.

Swipe →

THE SCALE

8.9× more than the same period last year.

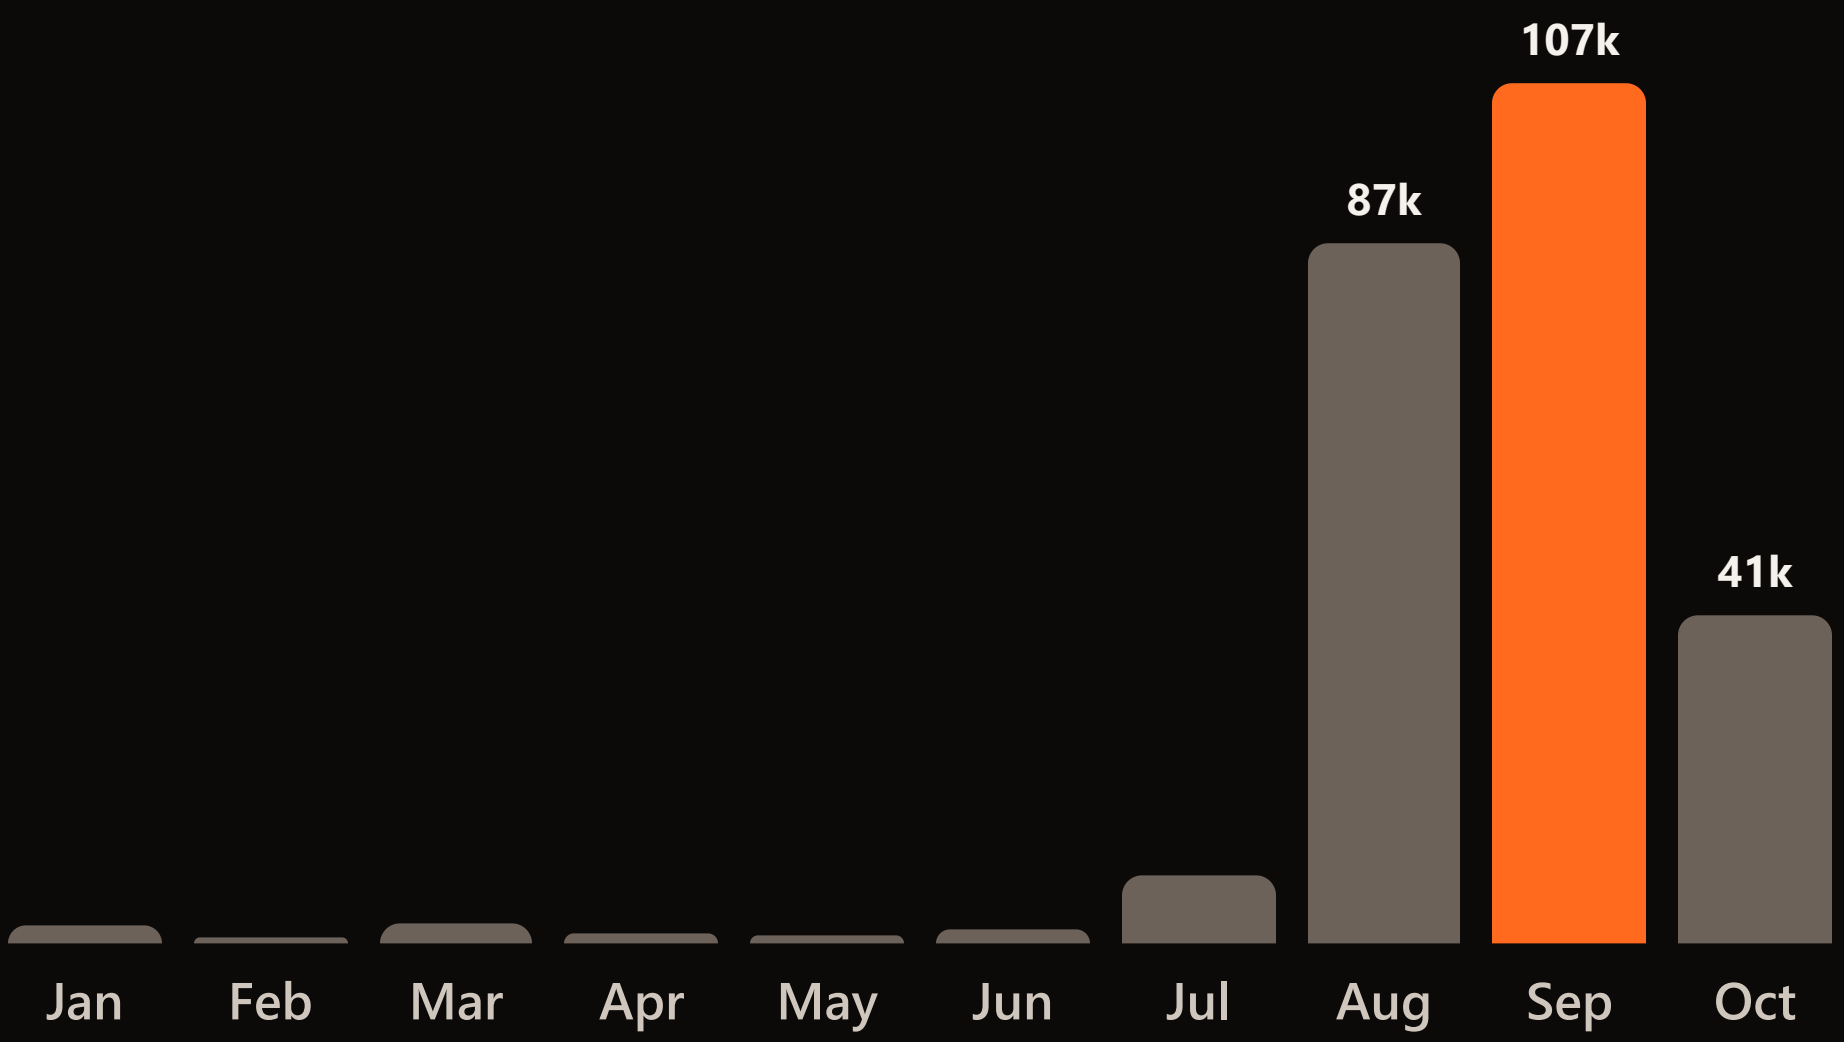

Same area, same window (1 January to 12 October), same satellite sensor. 2026 is not a normal fire year.

Source: NASA FIRMS (VIIRS NOAA-20), data as of 12 October 2026. 2025 = same period.

THE TIMING

93% of hotspots came between August and 12 October.

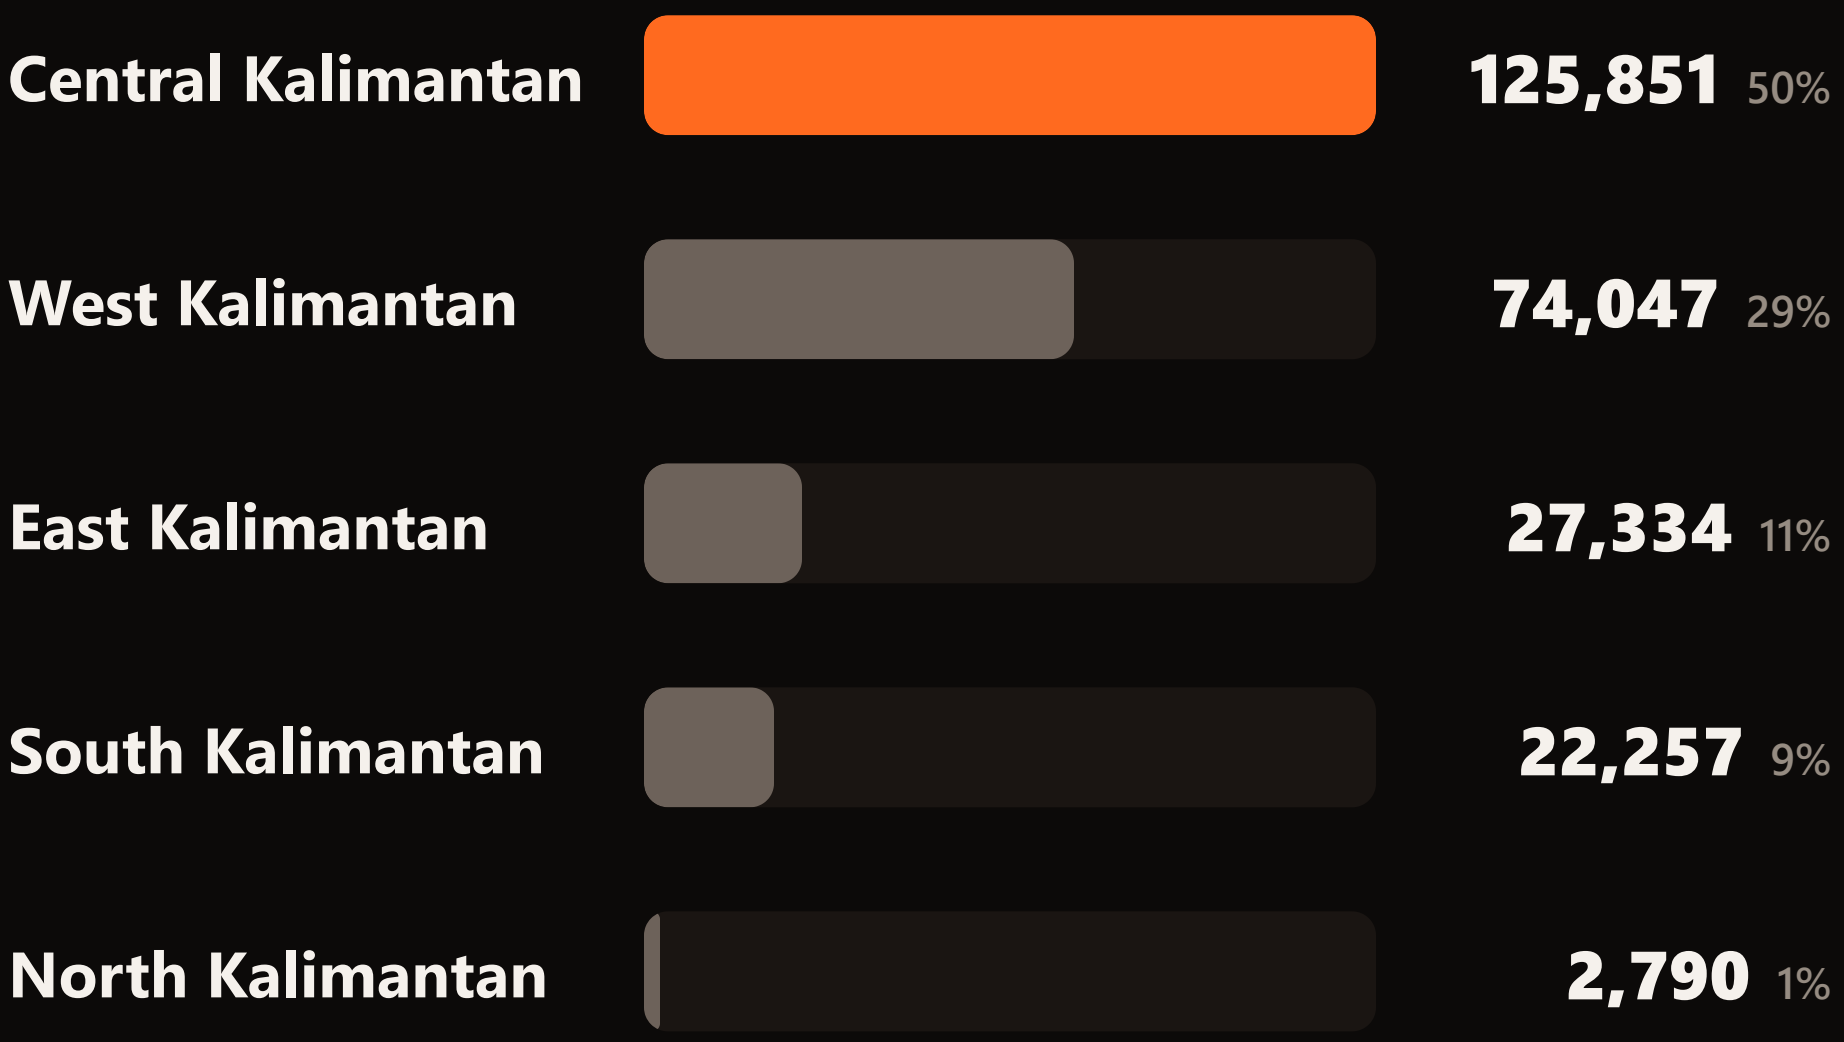

Sep alone had 107,082 hotspots (42% of the year so far). October covers only 1–12 so far.

Source: NASA FIRMS (VIIRS NOAA-20), data as of 12 October 2026

THE PLACES

Central Kalimantan holds about half.

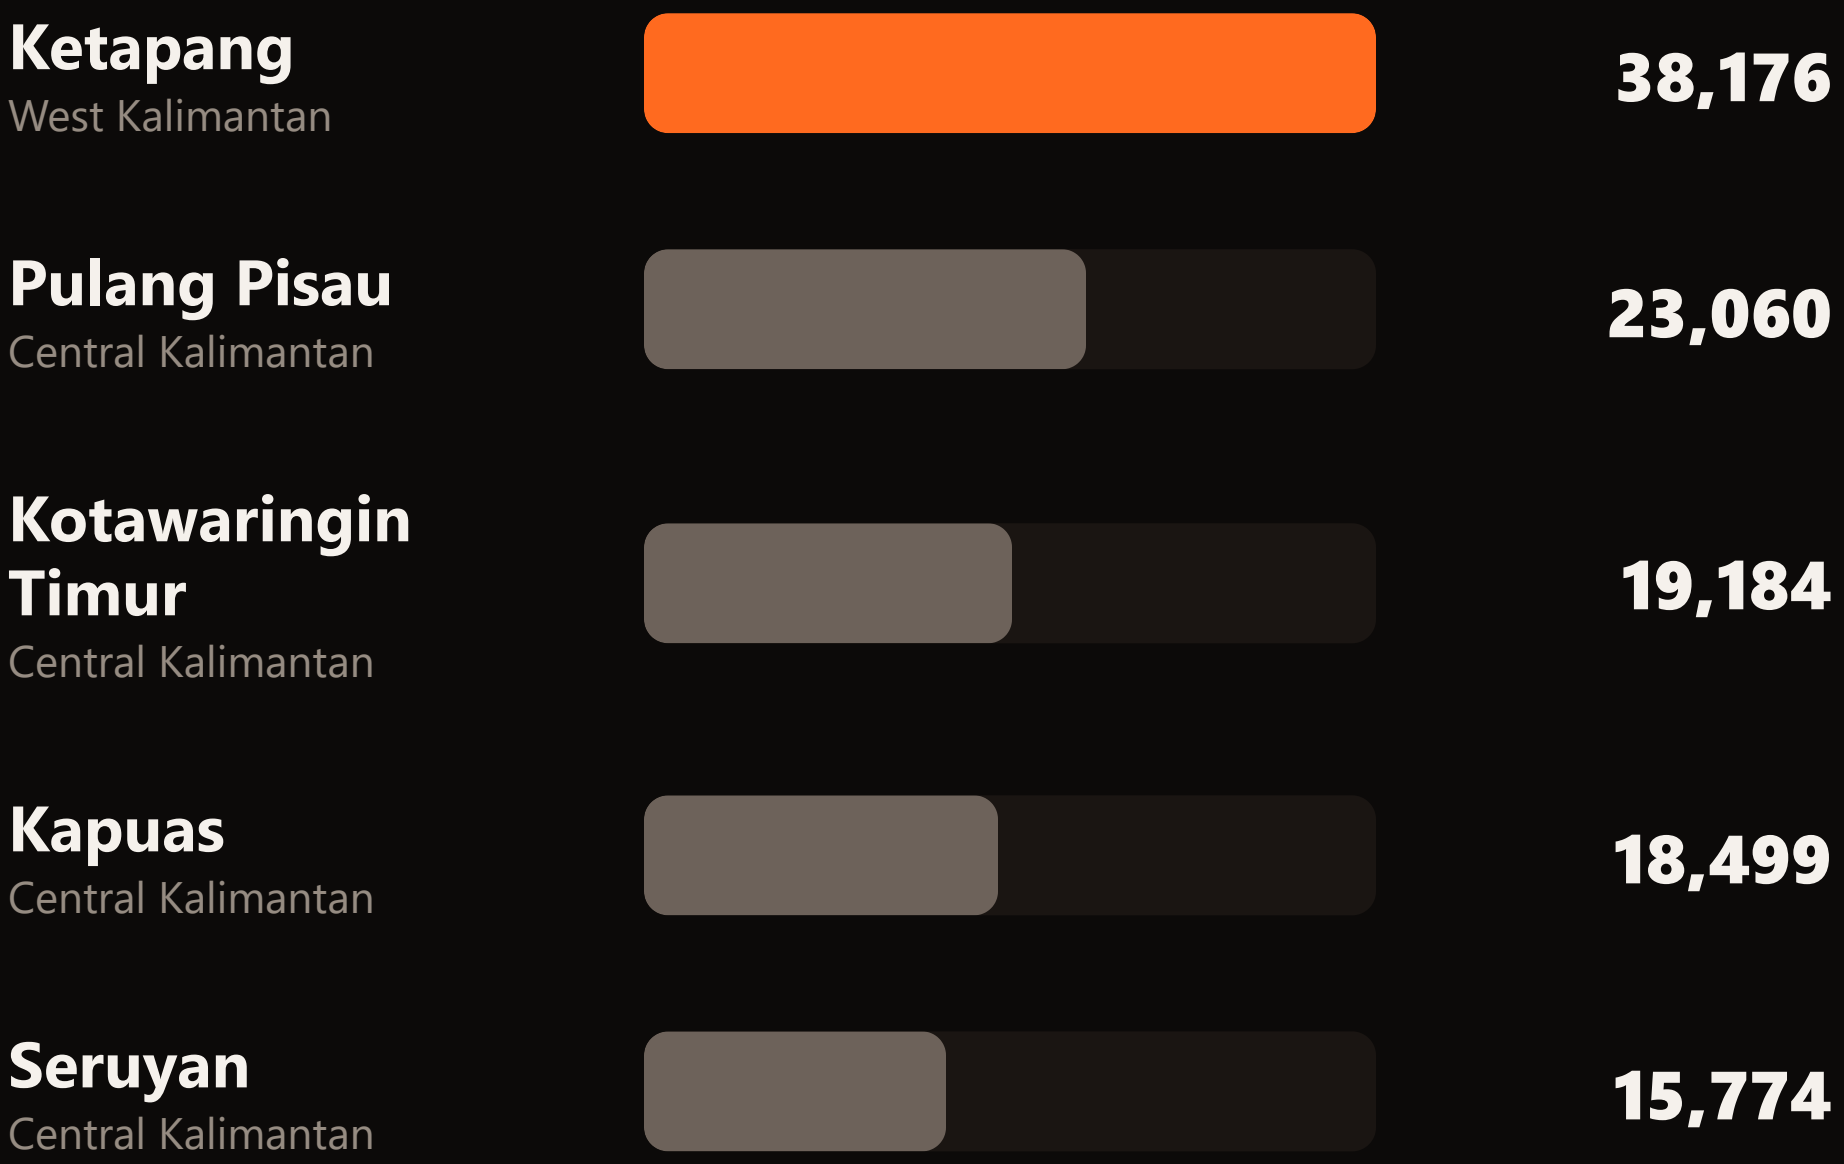

Hotspots per province, 1 January to 12 October 2026.

Source: NASA FIRMS (VIIRS NOAA-20), data as of 12 October 2026

THE HARDEST HIT

Five regencies, one burning landscape.

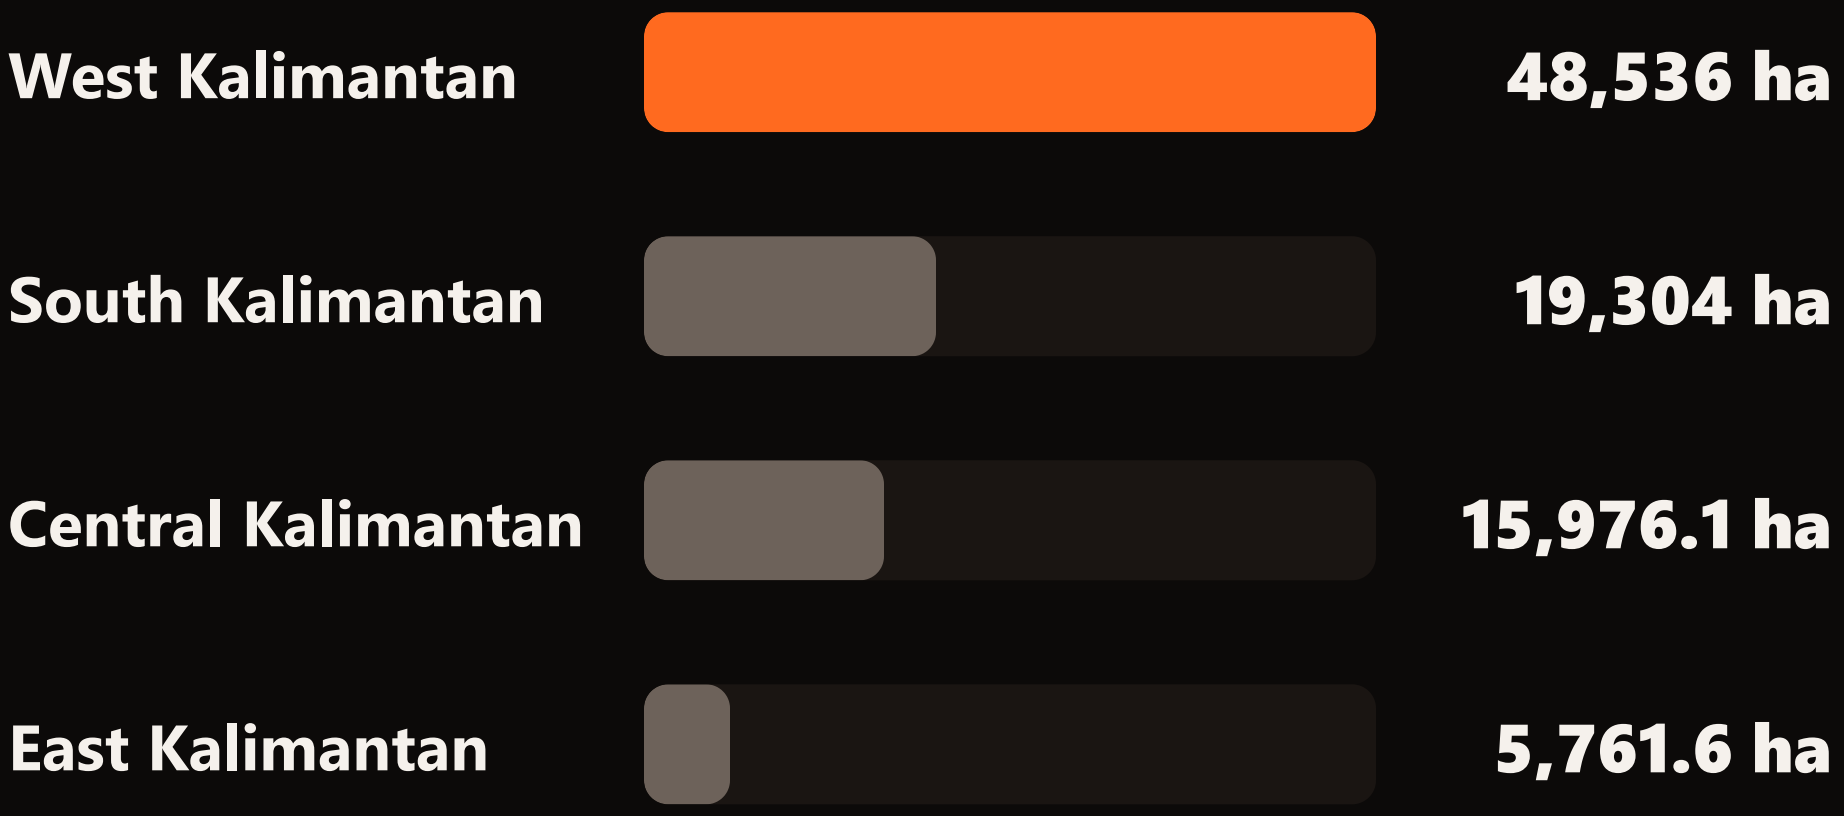

114,693 hotspots in just these five — 45% of the Kalimantan total.

Source: NASA FIRMS (VIIRS NOAA-20), data as of 12 October 2026

FROM DOTS TO DAMAGE

About 89,600 hectares reported burned.

That is larger than the land area of Jakarta (roughly 66,000 ha). Figures are provincial totals reported by BNPB through the press, 1 January to 14 September 2026. North Kalimantan was not reported.

Source: BNPB via CNBC Indonesia and Katadata

WHY IT MATTERS

This is not only a statistic.

Peat. Kalimantan's peatlands store huge amounts of carbon. When they burn, they smoulder for weeks and release it.

Air. Smoke drifts over towns and across borders, and harms the health of those who breathe it.

Wildlife. Fire destroys the habitat of species such as the Bornean orangutan, already critically endangered.

HONEST DATA

What these numbers can and cannot say.

- **A hotspot is not a fire.** Satellites detect heat. One fire can produce several hotspots, and some are missed under cloud or smoke.
- **Hotspots are not burned area.** Hectares come from a separate source (BNPB, reported by the press) at province level only.
- **Low-confidence detections are removed,** then hotspots are matched to regency boundaries.
- **Nothing is invented.** Where data is missing, the site says so.

WHAT YOU CAN DO

Help keep it in the conversation.

1. **Look up your regency.** Every regency in Kalimantan has its own story, built from this data.
2. **Share it.** Download Instagram Story templates and post them with #visualizekarhutla.
3. **Contribute.** Send an article, data, a correction, or your own artwork. It is all open source.
